

Product Name :

Automobile Electric Seat Teaching Board

Product Code :

POL-AUT0002

**Description :**

Automobile Electric Seat Teaching Board

Technical Specification :

The teaching board uses real car electric seat as the base. It can fully demonstrate the structure and work process of car electric seat system.

Structure and composition

Electric seat control switch, 12V power supply, teach-stage electric seat principle circuit diagram.

Features

It can really show the auto spare parts and its structure of the electric seat.

All the working processes and working conditions of the power seat can be displayed by operating control switch.

Various working conditions of the seat can be observed.

Complete circuit diagram of the power seat system is painted on the panel and you can learn intuitively how the electric seat works.

The device uses casters so that it makes it convenient for mobile teaching.

Power Seats' action can be controlled by a switch on the panel and the seat.

Production technology

Mobile stand with locking casters, you can move and lock the device easily.

Power supply: DC12V, battery.

Dimensions: about 1260x850x1890mm

Engineering Lab Equipment India
